Almost all New England lobsters are blue-green to green-brown when alive in the sea. They turn bright red when cooked. Lobsters of other colors are rare: a live blue lobster, its color caused by a genetic defect, is one in two million. A live red lobster is even rarer: one in 10 million, and a yellow or calico (mottled orange and black) lobster rarer still: one in 30 million.

*Like the Blue Lobster, this menu is as rare and only available to you!
Please note, menu only available for room service, and not offered in the dining room.*
